## ***Gillespie ties Northam, Perriello in fall matchup; both Democrats beat Republicans Wagner, Stewart***

### Summary of Key Findings

1. If the fall race for Virginia governor is between former Republican National Committee Chairman Ed Gillespie and current Democratic Lieutenant Governor Ralph Northam, voters are split 40% to 39%.
2. If the election is between Gillespie and former Democratic congressman Tom Perriello, voters are split almost identically, 39% to 39%.
3. Ideological moderates are divided, while political independents favor Gillespie over either Democrat by an identical margin: 40% to 30%.
4. In a November matchup, both Northam and Perriello beat the other two Republicans seeking the nomination, Prince William County Supervisors Chair Corey Stewart and Virginia Beach state Senator Frank Wagner.
5. With all 100 House of Delegates seats up in November, Democrats lead Republicans in the generic ballot test, 48% to 41%.

## Analysis

In an early look at the 2017 race for Virginia governor, both Democratic contenders are in a statistical dead heat with the leading Republican candidate. If the matchup in November is between current Democratic Lieutenant Governor Ralph Northam and former Republican National Committee Chair Ed Gillespie, voters are split, 39% Northam and 40% Gillespie. Voters are almost identically divided if the matchup is between former Democratic congressman Tom Perriello and Gillespie, with each candidate receiving 39%.

Regardless of which Democrat is on the November ballot, the structure of the race looks similar against Gillespie, coming down to who will win the ideological moderate and politically independent vote and the vote-rich region of Northern Virginia.

Ideological moderates are divided fairly evenly, regardless of the Democratic candidate, with a strong third supporting either Northam or Perriello against a strong third for Gillespie. However, Gillespie holds a 10-point lead over either Northam or Perriello among political independents.

Regionally, Hampton Roads favors either Democrat over Gillespie, although Northam's advantage in his home region is 8 points greater than Perriello's. Gillespie leads both Democrats by more than 10 points in Richmond-Central Virginia and by 5 points or more in the South-Southwest region. However, in Northern Virginia everything is statistically tied between the three, with nearly a quarter of the vote still undecided.

Both Northam and Perriello beat the two other Republicans in head-to-head matchups. Northam beats Prince William County Supervisors Chair Corey Stewart 41% to 33% and state Senator Frank Wagner 40% to 34%. Perriello beats Stewart 40% to 34% and beats Wagner 38% to 35%.

In addition to electing a governor, voters will be electing all 100 members of the House of Delegates in November. Democrats lead Republicans in the generic House of Delegates ballot test, 48% to 41%.

The survey's margin of error is +/- 3.7% at the 95% level of confidence.

"We're a long way off from the fall election, but we can see some fundamentals taking shape," said Quentin Kidd, director of the Wason Center for Public Policy. "The partisans and the liberals and conservatives are settling into their opposing camps, and the ideological and political middle is in play."

"The middle seems evenly split at this point, but they're not necessarily the battleground," said Rachel Bitecofer, assistant director of the Wason Center. "The question may be whether the candidates try to gain an edge by persuading those voters or focus instead on mobilizing their base in a turnout election."

**Questions 1-15 released on March 28**

Q16: [ASK ALL] Ok, thanks. Now, if the election for governor were being held today and the candidates were [ROTATE: Ed Gillespie, the Republican or Ralph Northam, the Democrat], for whom would you vote?

	All	Male	Female	White	Black	Nova	Rich	HR	S/west	18-44	45 +	Liberal	Moderate	Conservative	Republican	Democrat	Independent

**How the survey was conducted:**

The results of this poll are based on 831 interviews of registered Virginia voters, including 414 on landline and 417 on cell phone, conducted March 16-26, 2017. Percentages may not equal 100 due to rounding. The margin of error for the whole survey is +/- 3.7 % at the 95% level of confidence. **This means that if 50% of respondents indicate a topline view on an issue, we can be 95% confident that the population's view on that issue is somewhere between 46.3% and 53.7%.** The margin of error is higher for subgroups. All error margins have been adjusted to account for the survey's design effect, which is 1.2 in this survey. The design effect is a factor representing the survey's deviation from a simple random sample, and takes into account decreases in precision due to sample design and weighting procedures. Sub samples have a higher margin of error. In addition to sampling error, the other potential sources of error include non-response, question wording, and interviewer error. The response rate (AAPOR RRI Standard Definition) for the survey was 18%. Five callbacks were employed in the fielding process. Live calling was conducted by trained interviewers at the Wason Center for Public Policy Survey Research Lab at Christopher Newport University. The data reported here are weighted using an iterative weighting process on sex, age, race and region of residence to reflect as closely as possible the demographic composition of Virginia.
